In the 21st century, the diversified economic development of The Times also brings serious environmental pollution and energy tension. In order to effectively solve the environmental and energy problems, the exploration of renewable and green energy has always been one of the focuses of current research. The generation of wind generator can effectively solve these two problems, because it can transform wind energy into mechanical energy and then into electric energy, which has a very beneficial impact on the sustainable development of China's economy and the utilization of renewable energy. Therefore, it is of great economic benefit and practical significance to study the design and manufacture of the rotor bearing of wind turbine
